

Prospectus

Applied Mining Geology

Geological Structures

Who should attend?

This course is one of three similar courses that have been written to assist new Geology Graduates with application of the theory and knowledge gained at university. As part of their graduate development programme, this particular course will help the Graduate understand the significance of geological structures to the mining operation and how they must be mapped, recorded, plotted and interpreted as a matter of routine at the mining operation.

Course outcomes

On completion of the course, the candidate will be able to:

- Demonstrate an understanding of the principle geological structures and their characteristics,
- Plan and prepare to map geological structures,
- Map and record the important features of geological structures,
- Plot and interpret information recorded from geological structures,
- Communicate the acquired information.

Entry Requirements

BSc Geology Degree

Course Duration

5 days
